

**Amendment to the Claims:**

**This listing of claims will replace all prior versions and listing of claims in the application.**

**Listing of the Claims:**

Claim 1 (previously presented): A formed regenerated thermoplastic resin product, obtained by grinding a coated formed product mainly comprising a thermoplastic styrene-based resin and at least partly coated with a coating compound mainly comprising a thermoplastic resin having compatibility with the styrene-based thermoplastic resin with the coat left attached thereto, and then

re-forming the coated formed product,  
wherein the coating compound comprises a pigment incorporated therein, the pigment having been subjected to surface treatment with a thermosetting styrene-modified acrylic resin or a thermosetting acrylic resin having compatibility with the styrene-based thermoplastic resin constituting the formed product and the thermoplastic resin constituting the coating compound.

Claim 2 (original): The formed regenerated thermoplastic resin product as described in claim 1, wherein the pigment is an inorganic and/or organic compound.

Claim 3 (original): The formed regenerated thermoplastic resin product as described in claim 1, wherein the pigment is an aluminum flake.

Claim 4 (original): The formed regenerated thermoplastic resin product as described in claim 2, wherein the thermoplastic resin constituting the coating compound is a thermoplastic acrylic resin or styrene-modified acrylic resin.

Claim 5 (original): The formed regenerated thermoplastic resin product as described in claim 3, wherein the aluminum flake is coated with an organic polymer.

Claim 6 (original): The formed regenerated thermoplastic resin product as described in claim 5, wherein the organic polymer is an acrylic resin.

Claim 7 (original): The formed regenerated thermoplastic resin product as described in claim 5, wherein the aluminum flake is coated with a copolymer obtained by dissolving an ethylenically unsaturated monomer in an organic solvent, and then subjecting the solution to heat polymerization in the presence of a polymerization initiator or by reacting at least two selected from the group consisting of oligomers and monomers having at least one polymerizable double bond.

Claim 8 (original): The formed regenerated thermoplastic resin product as described in claim 5, wherein the spread of the organic polymer over the aluminum flake is 0.5% by weight or more based on the weight of the aluminum flake.

Claim 9 (previously presented): The formed regenerated thermoplastic resin product as described in claim 3, wherein the thermoplastic resin constituting the coating compound is a thermoplastic acrylic resin or styrene-modified acrylic resin.
